DETAILED ACTION

Status of the Claims

1. Claims 9-30 and 33-37 are pending.

Applicants' amendment and response filed on October 10, 2002 (Paper No. 16) has been entered and fully considered. Claims 9-24 remain withdrawn from consideration. Claims 25-28 and 33-37 have been amended, thus claims 25-30 and 33-37 are examined.

Rejection Withdrawn

Claim Rejections - 35 USC § 112

2. The previous rejection of claims 25-30 and 33-36 under 35 U.S.C. 112, second paragraph, regarding the term "at least 75% (90% or 95%) identical to the sequence of SEQ ID NO:4 (or SEQ ID NO:2)" or "at least 25% identical to the sequence of the Sp36 protein", or the amino acid sequence of Sp36 is not identified with a "SEQ ID NO:", is withdrawn in view of applicants' amendment to the claim, and applicants' response at page 4 in Paper NO. 16.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 25-28 and 33-35 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 25-28 and 33-35 are directed to a polypeptide comprising an amino acid sequence having at least 75%, 90%, or 95% sequence identity to SEQ ID NO:4, wherein the polypeptide reacts with an anti-pneumococcal Sp36 antibody (claims 25-27); to a polypeptide comprising an amino acid sequence having at least 75% sequence identity to SEQ ID NO:2 or 4, wherein the polypeptide is present in an organism of Group A streptococci or *Staphylococcus aureus* and the polypeptide reacts with an anti-pneumococcal Sp36 antibody (claim 28); or to a polypeptide comprising an amino acid sequence having at least 75% sequence identity to SEQ ID NO:2 or 4 or having 90%, or 95% sequence identity to SEQ ID NO:2, wherein the polypeptide has a sequence with at least 25% sequence identity to Sp36 protein of *Streptococcus pneumoniae* (SEQ ID NO:7) (claims 33-35). The specification indicates that the polypeptide which have at least 70%, 90% or 95% sequence identity to the reference polypeptide (page 11, lines 12-16) can be used as a vaccine (page 22, lines 7-10). The specification further asserts that antiserum raised against the pneumococcal Sp36 protein cross-react with Sp36 homolog identified from the group B streptococci and indicating conservation of epitopes between the polypeptides (Example 4). However, the specification does not specify which portion of the polypeptide is identical to SEQ ID NO:4 or 2 and reacts with an anti-pneumococcal Sp36 antibody, nor indicates how specific the reaction between the antibody and the polypeptide; and which portion of the polypeptide is identical to SEQ ID NO:4 or 2, and SEQ ID NO:7. There is no disclosure indicating the sequences having at least 75%, 90%, or 95% sequence identity to SEQ ID NO:2 or 4 are reacting with anti-pneumococcal Sp36 antibody specifically. Without guidance for structure to function/activity, one skilled in the art would not know which region or residue of SEQ ID NO:2 or 4 is essential for function/activity and how to identify a functional polypeptide. The lack of a

structure to function/activity relationship and the lack of representative species for the polypeptides having at least 75%, 90%, or 95% sequence identity to SEQ ID NO:2 or 4 as encompassed by the claims, applicants have failed to sufficiently describe the claimed invention, in such full, clear, concise terms that a skilled artisan would not recognize applicants were in possession of the claimed invention.

4. Claim 36 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. Claims 25-30 and 33-35 are rejected, and claim 36 is objected. It appears claim 37 is free of art of record.
